## Good Relations - Symbiosis

### Challenge

How does each animal benefit from their interrelationships?

Symbiosis is the general term used to describe intimate associations between pairs of species, loosely translated from the Greek, means 'living together'.

#### Types of Symbiosis

**Commensalism** is an association in which one of two organisms benefits from the relationship while the other, neither loses nor gains.

**Mutualism** is an association which both organisms benefit from their relationship.

Relationship	Commensalism/Mutualism	Animal 1	Animal 2
